Therm-L-Wrap™ 66

Product Highlights

• Operating temperature from -60°C to +200°C (-76°F to +392°F)
• Excellent radiant heat protection
• Excellent EMI shielding performance
• FAR Part 25.853
• Self-wrapping design
• Flexible

Therm-L-Wrap™ 66 is a self-wrapping, reflective sleeve designed to provide thermal protection from both radiant and convective heat. Composed of a woven fiberglass base fabric and a lamination of aluminum foil, the product can withstand convective heat soaks up to +200°C (+392°F) and simultaneously protect critical components from radiant or reflected heat.

The unique woven structure imparts a level of flexibility not found in other reflective products. It also allows the product to maintain a circular profile when flexed.

The self-wrapping design of Therm-L-Wrap 66 allows for quick and easy installation while the addition of a self-sealing adhesive reinforcement allows for permanent closure. The adhesive strip acts as a barrier to dirt and fluids while maintaining the full integrity of the finished aluminized sleeve.
